

Valgrind

Used the UTM tool to have a linux based VM, tried with arch linux that had issues to install valgrind.

Enters Kali linux, faced a issue of 404 while trying to update the package. Looking at the logs realised that invalid key issue. Took assistance from AI to get commands to run.

- Remove old invalid key.
- Get key from trusted source and save it.
- Update packages ✓
- Install valgrind ✓

Info

- "tee" tool that saves to a file plus outputs to stdout
- ".asc" extension ASCII-armored cryptographic files.
 - GPG/PGP public keys, digital sig, or encrypted mgs.
 - Plaintext, human readable
